MODEL6

PREDICTIVE AI PLATFORM

Turn historical data into predictive insights.

Custom predictive models for your business.

Model6 helps enterprises develop, deploy, and manage predictive AI models built on historical data. It delivers forecasts and probability scores through APIs or bulk scoring to support prioritization, planning, and informed business decisions.

Estimate

Forecast outcomes with custom predictive models.

Integrate

Bring predictions into business workflows.

Calibrate

Monitor performance and refine models as conditions change.

Core capabilities

Model development

Build, train, and validate predictive models using historical data.

Bulk processing

Generate predictions across large datasets through batch processing.

Administration portal

Manage model access, results, usage, and performance in one place.

API integration

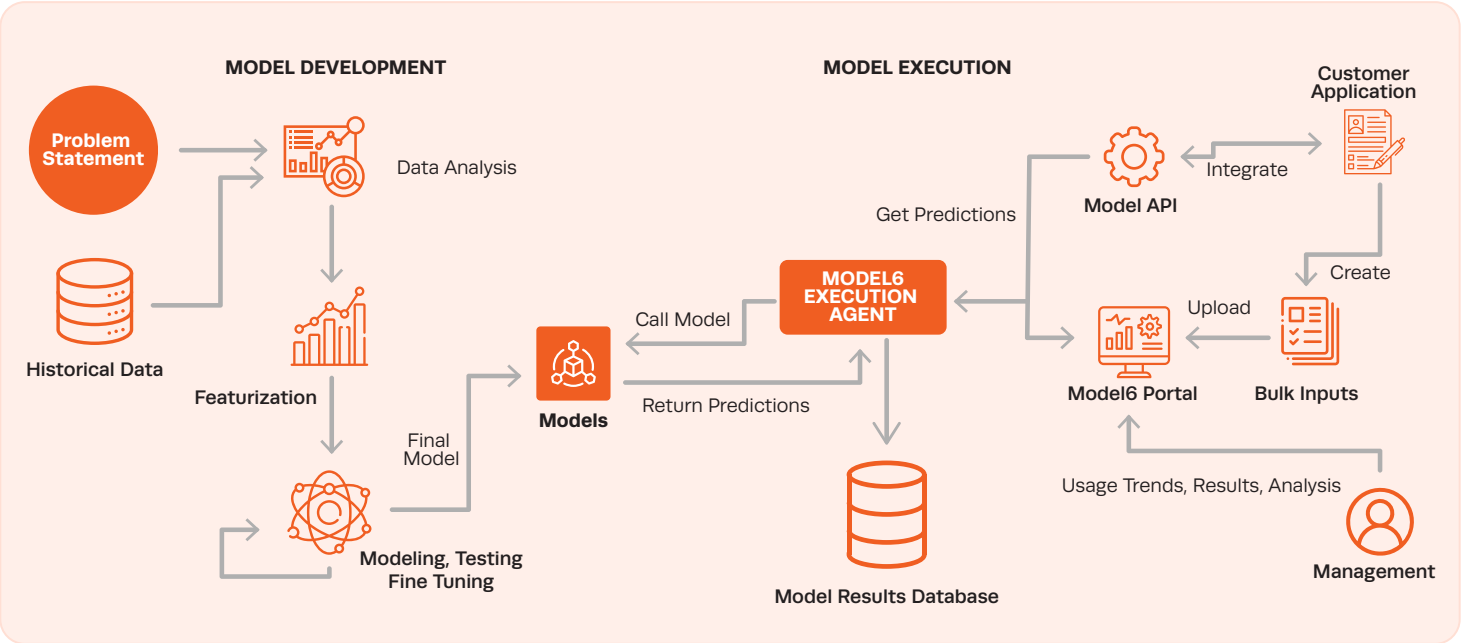

Deliver predictions to existing applications and workflows through APIs.

Designed for operational use

Model6 turns prediction questions into validated models and usable outputs, with deployment tailored to your data, systems, and governance requirements.

From historical data to operational predictions

A connected workflow for model development, scoring, and ongoing review.

1 Define the prediction

Set the outcome, population, time horizon, and decision.

2 Prepare the data

Assess historical data, quality, outcomes, and input variables.

3 Build and validate

Train models and test predictive performance.

4 Deploy the model

Deploy the validated model through agreed interfaces.

5 Deliver scores

Return predictions via APIs or bulk workflows.

6 Monitor and refine

Track model accuracy, drift, and new outcomes.

Illustrative business applications

Conversion and growth

Estimate the likelihood of conversion, enrollment, or additional product adoption.

Risk and retention

Identify records with higher predicted likelihood of default, cancellation, or churn.

Planning and intervention

Forecast outcomes so teams can prioritize reviews, outreach, or support.

Start with one outcome worth predicting

Tell us what you need to anticipate. We can review the prediction question, available data, validation approach, and how the results would fit into your existing workflow.
